

Press Release Mellex AG

**The first wearable solution for forward thinking hoteliers: Mellex AG launches SAMFEX wearable, tailored for the new TREKSTOR Smartagent**  
**SAMFEX and TREKSTOR introduce a revolutionary back-of-house management tool – highly efficient, flexible and easy to use**

*Zurich, June 28, 2017* – Right in time for the world’s largest hospitality and technology show HITEC 2017 in Toronto, German-based hospitality software developer Mellex launches the next step in innovative back-of-house management solutions: SAMFEX wearable. The software is an evolution of the company’s flagship product SAMFEX, now capable to function in perfect harmony with the Microsoft Windows 10 based TREKSTOR IoT wearable. Beyond a simple Smart Watch, the new device runs with Windows 10 IoT Core; it can be used for most hotel applications SAMFEX has on offer and will help make processes and workflows even more efficient. With its rugged housing, it withstands harsh conditions and is durable. Light and small, the wearable will quickly become part of the daily gear – be it in maintenance, housekeeping or guest service. The device will be available from Q3 2017, directly via TREKSTOR’s online shop.

Always on top of the latest tech innovations, Mellex CEO and founder Alexander Melle has now partnered with the German company TREKSTOR to push SAMFEX’s usability to the next level. With their new IoT wearable, the software’s many functions and advantages for a hotel crew’s daily business will give efficiency a new dimension. SAMFEX is an application built with

vast field experience in service and maintenance management for hotels and related facilities. Whether a property is small or large, whether part of a global corporation or a standalone building, the app is tailored for each client's business needs, enables fast and clear communication within and between departments, is fun to work with and saves time and money. The tools, available through easy mobile access, comprehensive desktop functionality and now even through the new wearable: Engineering management, work order management, preventive maintenance management, energy tracking management, global asset & inventory management, duty report management, mini bar management, housekeeping management, luggage tracking, service request and service recovery management. Just like the desktop and mobile version, SAMFEX wearable is intuitive to use, quickly set up and requires little training. Besides, the handy SAMFEX wearable devices are equipped with a bright TFT LCD screen, so information can be read at a glance, and with highly sensitive capacitive touch, so they can even be operated when wearing gloves. The powerful dual-band Wi-Fi, the Bluetooth® 4.0 Classic and NFC open up many possibilities of direct wireless data exchange and the lithium-polymer battery with an impressive capacity of 430 mAh lets the IoT device survive a long working day with no need for recharging.
